

## CLAIMS

1. A mobile communication terminal which can be made to communicate with a base station when being connected with an  
5 IC card that stores an identification number peculiarly assigned thereto and a subscriber's personal information, characterized in that said mobile communication terminal comprises:

a storage unit for storing identification numbers of IC  
10 cards; and

an identification processing unit for determining whether or not an identification number of an IC card connected to said mobile communication terminal is stored in said storage unit, and for determining whether said mobile communication  
15 terminal is being fraudulently used when the identification number of the IC card connected to said mobile communication terminal is not stored in said storage unit.

2. The mobile communication terminal according to Claim  
20 1, characterized in that said identification processing unit makes a request for input of a password peculiar to the mobile communication terminal, and, when accepting a wrong password, disables the mobile communication terminal.

25 3. The mobile communication terminal according to Claim 1, characterized in that said identification processing unit transmits both the identification number of the IC card connected to the mobile communication terminal, and an ID peculiar to the mobile communication terminal to the base  
30 station so as to make a request of the base station to perform

authentication of the IC card, and, when receiving a result indicating that the IC card is an unauthorized one from the base station, disables said mobile communication terminal.

5           4. A mobile communication terminal which can be made to communicate with a base station when being connected with an IC card that stores an identification number peculiarly assigned thereto and a subscriber's personal information, characterized in that said mobile communication terminal  
10 comprises:

          a storage unit for storing identification numbers of IC cards and subscribers' personal information; and  
          an identification processing unit for disabling information except a subscriber's personal information  
15 corresponding to an identification number which is stored in said storage unit and is also stored in an IC card connected to said mobile communication terminal.
